

VALEMOUNT

TRADING

PRODUCT CATALOGUE 2025

OUR STORY

Valemount was born from a simple vision and combined with an ambition to transform an industry. From taking over a small bird seed business in 2012 based in Durban, Valemount is now the largest bird seed manufacturer in South Africa with the ability to service any customer anywhere in the country.

With no experience in seed and grain, Rob and Damien Westerman faced overwhelming odds. These challenges forced a different approach to the bird seed market and ultimately changed the industry for the good.

Over the past few years Valemount has expanded to 4 regional distribution and manufacturing centres across South Africa providing employment to over 212 people and empowering 19 new business owners.

Valemount has also increased its basket of goods, supplying leading global brands to the South African market. Valemount continues to strive to bring South Africa the latest and best the world has to offer. In combination with our global partners, M-PETS and Pet Rebels, and locally produced brands, Westerman's and Animal Zone, Valemount now offers a premium bouquet of brands that elevate the lifestyle of pet ownership in all its forms.

OUR VISION

To be the leading pet company in Southern Africa.

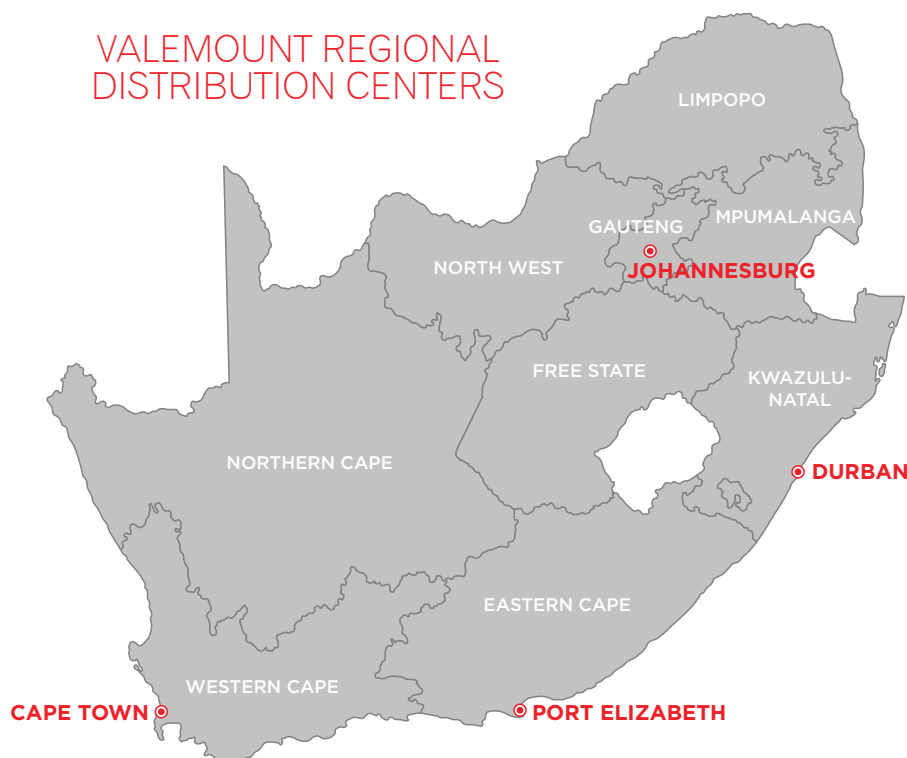

OUR CORE BELIEFS

Innovation, integrity, quality, agility, humility, excellence & passion.

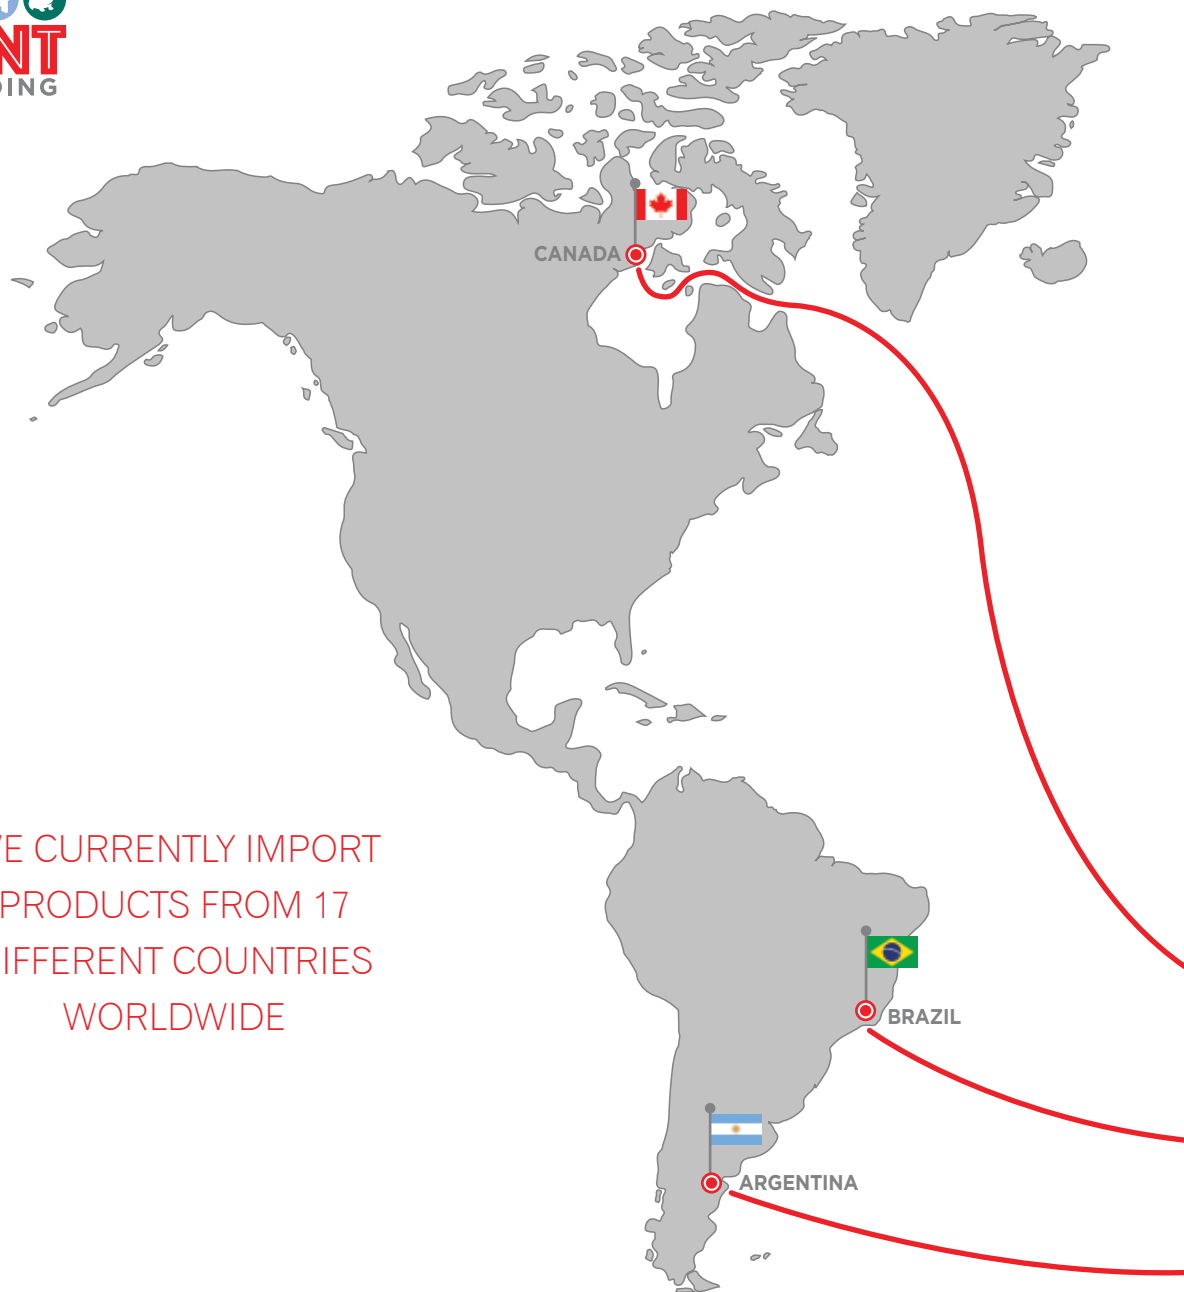

OUR MISSION

To create value for our customers through the strategic focus on increasing our offering, capability and capacity; thereby growing and supporting our customers. Through innovation and adaptability, we strive to continually learn and better ourselves in order to be the best we can be.

The Giro & Viaggio pet carriers conform to IATA standards and have been approved by Bidair Pet Lounge.

Photo: Emma O'Brien

GIRO CARRIER

These carriers have a metal door on the top and in the front that close securely with a double lock. The top door allows for easy loading of your pet, with a handle for comfortable carrying. The 4 side clips ensure that the carriers are securely fastened together. These carriers are ideal for transporting your pet in the car.

Description	Code	Dimensions	Barcode
Small	PC07	50 x 33 x 30 cm	5415341001862
Medium	PC08	56 x 37 x 32 cm	5415341001886

Ensuring no hassles when pets need to fly. Available from extra-small (perfect for small breeds or puppies) to extra-large (for bigger dogs like Labrador Retrievers).

Tip: Pets must still be able to stand and turn around comfortably in the carrier without their head touching the ceiling.

XXL

The International Air Transport Association (IATA) supports aviation with global standards for airline safety, security, efficiency and sustainability.

LIVE ANIMAL REGULATIONS

Container Requirement 1 - Applicable to domestic dogs and cats.

CONTAINER CONSTRUCTION

Principles of Design

The following principles of design must be met in addition to the General Container Requirements outlined at the beginning of this chapter.

The interior of the container must be smooth with no protrusions that the animal can bite or scratch to cause damage to the integrity of the container in any way.

All openings must be nose and paw-proof to avoid injury to the animal and handlers.

Openings must be a maximum of 25 mm x 25 mm (1 in x 1 in) for dogs and 19 mm x 19 mm (3/4 in x 3/4 in) for cats. The openings may have to be smaller in order to be nose and paw proof.

If a container has wheels, they must be removed or rendered inoperable.

Materials

Plastic: Rigid plastic containers are suitable for most breeds of dogs but their acceptability is at the discretion of the carrier. Some rigid plastic containers may not be suitable for large dogs, or dogs that are aggressive.

The illustrations shown in this container requirement are examples only. Containers that conform to the principle of written standards for the species but look slightly different will still be considered compliant with IATA minimum standards.

Size (Mandatory performance requirements when selecting a shipping container)

Each animal in the container must have enough space to stand, sit erect, to lie in a natural position and to turn about normally while standing.

Animal Measurements:

A = length of animal from tip of nose to base/root of tail.

B = height from ground to elbow joint.

C = width across shoulders or widest point (whichever is the greater)

D = height of animal in natural standing position from top of the head or the ear tip to the floor (whichever is higher).

The calculated dimensions are internal container dimensions. Minimum internal container dimensions for a single animal:

Container length = $A + 1/2B$

Container width = $C \times 2$

Container height $E = D + \text{bedding}$

Snub-nosed breeds require 10% larger container.

Door

The door must be constructed of plastic, wood, plywood, welded or cast metal of sufficient thickness so as to preclude the animal from bending or distorting the door.

The door must form the whole of one end of the container. It can either be sliding or hinged.

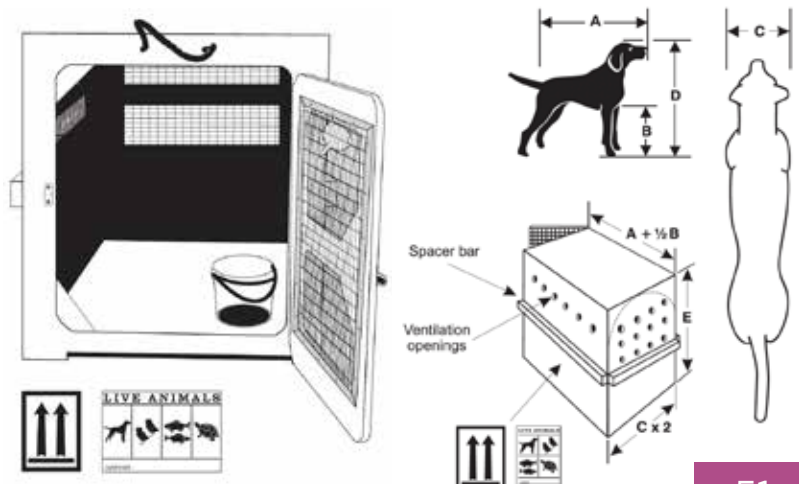

For all containers using doors with locking pins, the pins must engage the container by at least 1.6 cm (5/8 in). The shipper must ensure that all hardware and fasteners are in place and serviceable.

Plastic containers: Doors made of plastic are permitted, provided that hinges and locking pins are made of metal of sufficient thickness.

When rigid plastic containers are used the door should be further secured by application of additional removable fasteners such as cable ties in the four corners of the door frame. Care must be taken when selecting the fasteners to ensure these will not cause injury to the animal or to the handling personnel.

There must be an adequate means of fastening and sealing for containers travelling to countries where sealing is required.

The maximum size openings in the welded mesh must be 25 mm x 25 mm (1 in x 1 in) for dogs and 19 mm x 19 mm (3/4 in x 3/4 in) for cats. However, the openings may have to be smaller in order to be nose and paw proof. The welded mesh must fully overlap the frame. It must be attached to the outside of the frame using staples at least 19 mm (3/4 in) long and at intervals of no more than 25 mm (1 in). In addition, for dog containers made of wood, a wooden frame or strips of wood (to IPPC regulations or manufactured wood e.g. exterior grade ply) must be placed over the edges of the wire and affixed with screws. This compresses the wire between the strips of wood and the outer surface of the container. The wooden compression strips/frame must be at least 12 mm thick and of a placement to adequately secure the wire. Fasteners must not penetrate into the container.

LIVE ANIMAL REGULATIONS cont.

Sides

Side walls must be solid with sufficient ventilation as prescribed.

Plastic containers: Where containers are assembled from a top and bottom part, these must be securely bolted together. Plastic clips must not be the only fasteners holding the top and bottom part together. The use of metal nuts and bolts in every hole is recommended.

Wooden containers: For containers made of wood, or plywood, the minimum thickness of the sides is 12 mm (1/2 in) for dogs and 6 mm (1/4 in) for cats.

Floor

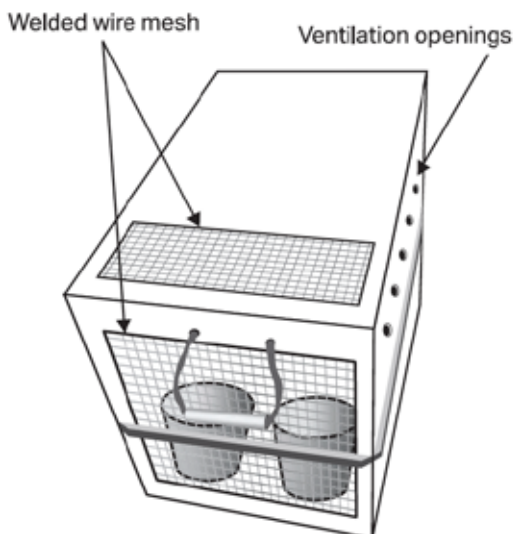

The floor must be solid and leak-proof.

Roof

The roof must be solid, but ventilation holes and welded wire mesh are allowed over the whole surface provided that they do not reduce the integrity of the container and the strength of the roof itself.

Ventilation

The total ventilation area must be at least 16% of the total surface of the four sides. The provision of additional ventilation openings on the roof or sides of the container or larger ventilation openings covered in welded wire mesh in order to increase ventilation are permitted.

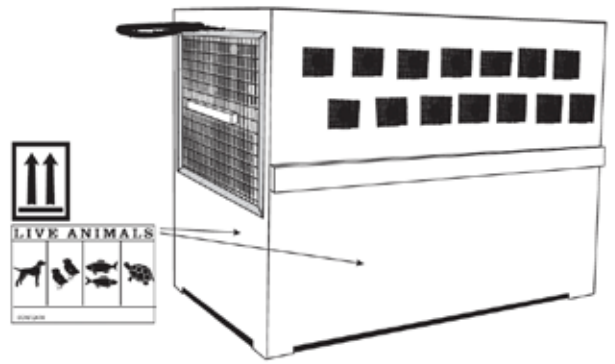

Ventilation must be provided on all 4 sides of the container. Ventilation openings on the sides and the back must be placed over the upper two thirds of the container.

The whole of one end of the container (which can be the door) must be ventilated from the top to the bottom.

The welded wire mesh insert covering ventilation openings must be securely fixed to the container so that the animal cannot dislodge it.

All openings must be nose and paw-proof, in the case of cats and small dogs these may have to be covered with a second layer of wire mesh. Where a second layer of welded wire mesh is required to make the container nose and paw-proof, both layers of mesh must meet the minimum standards prescribed for the species. It is very important that no animal has any surface or edge at which it can gnaw or scratch.

Space Bars

Must be provided along both sides of the container. A space bar must also be provided along the back of the container.

Spacer devices must be positioned to prevent other freight blocking the ventilation.

Handles

Appropriate handles must be provided. Spacer bars where suitable may be considered as the handles. Handles must provide the handlers a means to move the container without a risk of being scratched or bitten by the animal.

SPF Containers

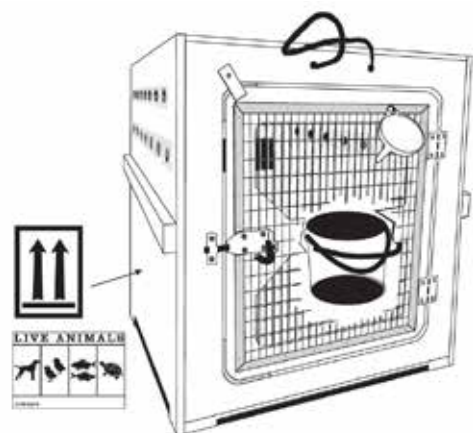

Specific Pathogen Free (SPF) dogs and cats must be transported in containers that conform to the requirements published in this Container Requirement. A "Laboratory Animals" label must be affixed to the container and "This Way Up" labels must be placed on at least two opposite sides. Filter containers for SPF consignments have special gauge air filters fixed in the ventilation apertures. Ventilation must be a minimum of 16% of the surface area of the four sides. Sufficient water must be provided for the journey. Food must be provided, if required, at the point of origin in order that the sealed container is not opened during transport. A viewing panel must be provided on SPF containers.

Labelling

A green "Live Animals" label/tag or a red "Laboratory Animals" label/tag is mandatory on all live animal consignments. "This Way Up" labels/tags are also mandatory and must be placed on at least two opposite sides. The label or tag can be imprinted on the container.

Feeding and Watering

A water container must be present and affixed within the shipping container with outside access for filling that does not require the opening of the shipping container allowing potential escape of the animal. Food containers must be present either within the container, if sealed, or attached to it. Food may be attached to the travelling container for use in case of delay. Note illustrations are examples only, containers or receptacles that are attached may look different provided they meet the standards described.

PET CARRIERS & CRATES

Our Magnum & Maxi are extra big flow crates which include a washable cushion, handy pocket and detachable storage bag.

Cushion Included

FLOW CRATE

Foldable crate that folds up in 20 seconds. Odour & stain-resistant that includes a soft cushion inside. Practical carry handle, as well as three openings and two pockets. Ideal for show dogs/cats and travelling in the car.

PUPPY TRAINING PADS

Puppy pads encourage puppies to urinate on the pads and are the perfect size for training your puppy or for dogs with special needs. Pads are super absorbent. This ensures that your floors, couches and carpets are not ruined by urinary stains. The pads absorb the urination and can be discarded immediately, ensuring no smell is left behind.

ALEXANDRIA 4-PIECE LITTER TRAY

Consists of 2 removable litter trays, 1 sieve and 1 rim. By removing the outer rim, you can lift up the sieve, sifting the waste from the litter making it easy to throw the waste straight from the sieve into the bin, without using a litter scoop, thus it is more hygienic and clean. The double tray system allows you to interchange the litter trays for cleaning and it makes the litter removal process easy and convenient. The tray and rim are connected with Easy Click clasps. This tray works with traditional clay, clumping and silica gel litters.

CAT WANDS & TOYS

Playing is a vital activity for cats. Cats are predators by nature, just because they are indoors, does not mean that they don't have the instinct to hunt. This is where play and toys comes in and is vitally important for them. Toys help provide a stimulatory environment for your cat, making for a happy cat. Play also gives them an outlet for their energy.

Colours may vary depending on stock available.

Tip: To ensure that your wheel is big enough for your hamster, their back must not be arched when they run.

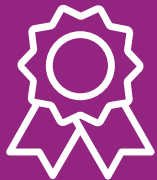

RESPONSIBLE MATERIALS

The best plush quality. Responsible wood! Non-toxic materials! Petrebels only works with factories that create products according to the latest environmental requirements. Sustainable policy and solutions is a must!

QUALITY WITH GUARANTEE

Petrebels products are stable and of high quality. We are proud of what we make and we also guarantee good quality. Petrebels therefore gives a factory guarantee on all their products.

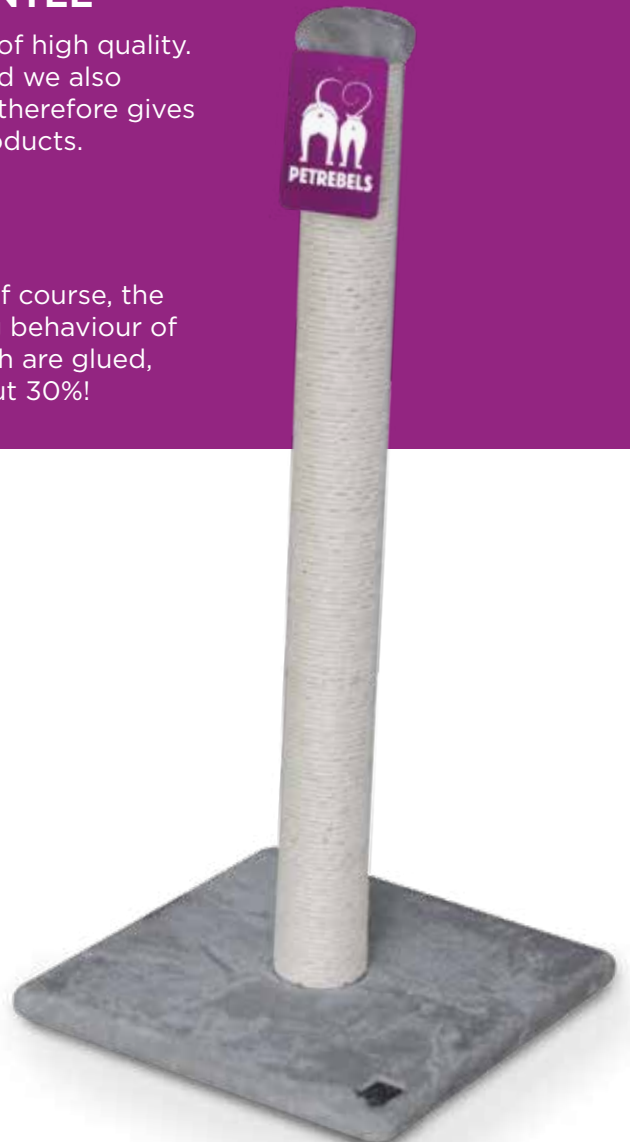

LONG SERVICE LIFE

Petrebels glue all their materials. Of course, the lifespan depends on the scratching behaviour of your cat. That is why sisal and plush are glued, which extends the lifespan by about 30%!
